

*CARE AND SECURITY -  
WITH ONE TOUCH*

# Modern communication services for care sector

Sencom provides modern and comprehensive communication service environments for the public and private elderly care sectors. Video connection forms the core for efficient and humane service communication.

Video connection opens quickly between the doctor, nurse, relatives and elderly patient allowing faster medical diagnosis in care situations.

Customers can order local services to their home by simply contacting the service-point operator.

Video conferencing brings efficiency for the internal and external communication within the whole organization.

## CARE AND SECURITY - WITH ONE TOUCH

# How video connections improve care services?

More diversified services can be offered for the people needing home services. Fast and easy video connection to health care services, relatives and home services makes elderly people feel secure in their own/care homes. Easy-to-use service tablet opens and receives the video call **BY ONE TOUCH**.

Routine controls and sharing information with patient's relatives becomes easier. Diversity of home services is ensured especially in regional areas.

### **Sencom Care services:**

Customized and secure video communication environment is provided with a ready cloud service infrastructure and pre-installed service tablets. User training and support are included in the agreement.

Unlimited amount of connections and service partners can be added in the communication environment. Sencom Care service is a globally scalable communication solution.
